Stafix at the Edenvale Child Welfare

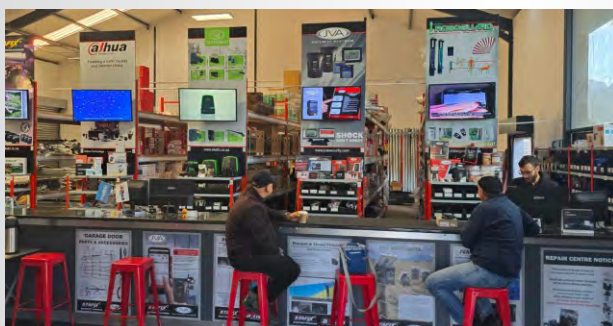

Edenvale Child Welfare

A massive thank you to **Stafix Electric Fence and Security Centres in South Africa, IHC Electric Fencing and Mamba Strike Force** for your incredible donation and work on our electric fence. It is beyond appreciated. Bless you for your kindness.

Paarl Branch Relocation

We're excited to announce that our Paarl branch has moved to a new location! With a bigger facility, improved layout, expanded product offering, an in-house gate motor repair centre and full training centre, we're now better equipped. Visit our new branch and experience the same great service, now in a larger and more convenient space. We look forward to welcoming you! **Stafix Paarl. Unit 1, Huguenot Park. 19 van der Merwe Street Paarl.**

Stafix 30-Year Anniversary

Stafix Security Centres – Celebrating 30 Years of Excellence 30 Years of Protecting What Matters Most

As we proudly celebrate our 30th Anniversary, we extend our gratitude to our loyal customers, dedicated staff, trusted suppliers and business partners, all of whom are sincerely valued for their support over these years. Your trust and partnership have been significantly instrumental in our success.

As we mark this milestone, we reflect on our journey, always aimed at continuous improvement in quality, innovation, reliability and exceptional customer service. Our success over the past 30 years has been driven by a commitment to delivering products which offer outstanding performance, durability, and compliance with industry standards. Whether securing a residential property, protecting a business, or managing a large-scale agricultural operation, customers trust Stafix Centres to provide dependable solutions to their specific requirements.

We are continuously researching, innovating and training to ensure that our staff are equipped to offer expert advice, technical support, and can work closely with clients to ensure that they receive the right solutions and ongoing support. This builds the long-lasting and much valued relationships that have become the foundation of our business.

Innovation remains the heart of everything we do. By continually embracing new technologies, including remote monitoring capabilities, smart security integration, and energy-efficient systems, we remain committed to delivering modern solutions that provide ever greater convenience, reliability and peace of mind.

JVA QT13 Security Home Energizer and Alarm Panel

QT13

QT Standard Features

3 Joule Security Energizer

Gate & external receiver input

Lithium Battery Compatible

Siren & Strobe Outputs

Powerful and Compact

On-board RFI

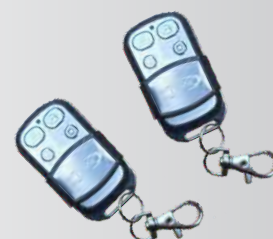

QT Premium

Free App through Wi-Fi

No subscription fees

Virtual Keypad

8-Zone RFI Alarm Panel

The QT 13 is a new, compact, ergonomically designed, single zone, 3 Joule energizer. The energizer, through the addition of the optional plug-in Wi-Fi module, gives you the full *Premium* upgrade features which include features such as JVA Virtual Keypad Programming, Cloud Router Access (off site control and reporting) and the ability to add up to 8 Wireless devices such as Roboguards onto the energizer.

Standard Features

- LED status indication
- Powerful 3J peak output energy
- IEC 60335-2-76 Certified
- Alarms on fence short or open circuit
- Wall-mountable, robust enclosure
- Detachable PCB for ease of installation & repair
- Gate input
- Key switch or remote arming
- Low power mode
- AC fail, low battery and bad battery detection
- Onboard configuration switches for simple programming
- Simple easy-to-replace Glass Fuse DC Input Protection
- Switched 12V outputs for siren and strobe
- Micro processor controlled
- Simple setup via on-board switch
- Panic mode from optional 4-button remote
- JVA lithium or lead acid battery ready
- Built-in 433MHz remote control receiver
- Reverse battery pole protection

JVA QT Premium Features via Wi-Fi plug in device

- Full Cloud Router Features
 - Real time notifications and alerts
 - Site sharing
 - Full site history log
 - See your voltage live
 - No monthly charge
 - No monthly subscription
- Virtual keypad programming
- Virtual Keypad allows the user to pair up to 8 approved 433MHz sensors such as door contacts, PIRs, or Roboguard beams

JVA High Power LCD Game Energizer

JVA Mains/Battery High Power LCD Energizers

The request from farmers locally and internationally has been for a powerful but simple-to-operate and use big mains battery energizer – something with the simplicity and power of the old Stafix M36, but able to run on a battery and have all the features of the MBXL's 16 Joule unit. Using the tried and tested Energizer design of the 32 Joule Jumbo a sealed all-in-one MBXXL unit has been developed.

The NEW JVA High Power LCD (Liquid Crystel Display Screen) IP Energizers[®] are available in various models.

All the units are ready-to-go out the box and can be paired to the JVA Digital Fault Finder Remote (DFFR) for added remote control arming and disarming. Factory default settings can be changed using the Virtual Keypad programming ability from a smart phone. All units can communicate through Wi-Fi to the JVA Cloud Router. Cloud router allows multiple energizers and sites to be monitored and controlled from one platform from anywhere in the world.

JVA LCD Energizer Range Features:

- Mains powered 110V/240V or
- Battery powered 12V/24V
- High joule power on demand
- JVA remote compatible
- IP Energizer cloud management
- Free Cloud Router APP - no monthly charges
- LCD showing KV, battery voltage,
- Amperage and stored energy in joules
- Auto-Sync TM safety technology
- Solar capability
- Smooth pulse wave shape
- Overload indication (audible and visible)
- Lightning protection
- Reverse battery protection
- Self-resetting fuse
- Low battery indication
- Over discharge battery protection
- Battery life maximization
- Battery voltage measurement
- Ant and moisture protection
- UV stable enclosure
- Audible alarm
- Bi-Polar output ability
- Earth quality monitoring and LCD output
- 3-year Warranty

*Virtual Keypad Programming
via Smart Device when in
proximity to the
MB LCD Energizer*

JVA SV35 & SV50

Farmers have asked for more power with which to strip graze and want to avoid heavy cumbersome set ups. To make sure you have continued 24/7/365 performance, we have fitted a 30 Amp Lithium battery to the 5 Joule unit with a large 60 Watt solar panel so livestock will be protected 24/7. Arriving in August, the SV30 and SV50 will add a 3- and 5-Joule Solar LCD Unit, extending the popular JVA SV5, SV10 and SV20 LCD Solar Energizer Range. The 3-joule unit uses a 20 amp lithium internal battery, coupled to a 30 watt solar panel, and the 5-joule uses a 30 amp lithium battery coupled to a 60 watt solar panel. Like all the LCD units stored joules output, voltage and battery level are all displayed on the large LCD display.

The units are robust, have a strong carry handle and are fully sealed against moisture. We have heeded customer requests and so the SV30 & SV50 have the versatility to be placed on a star picket, round post, solar earth spike, or on the ground with the new, modified bracket which ensures that the energizer is kept off the ground.

	SV2	SV5	SV10	SV20	SV35	SV50
Stored Joules	145mJ	650mJ	1.1J	2.9J	4.2J	6J
Energy Output	120mJ	500mJ	0.8J	2.4J	3.3J	5.2J

Earth Stake Enclosure

Ground mount
IEC
compliant

Concrete mount
IEC
compliant

To meet SANS standards, earth stakes need to be protected and need to be tested regularly. We have designed robust enclosures with clear lids to easily inspect the earth stake with easy options for conduit to join the enclosure.

JVA Fin Stand

Not everyone has a Y-Standard available on which to put their Solar unit, nor does one want to carry around a long heavy post. The JVA Solar Fin Stand is light and compact. This full-length stand can be unscrewed in the middle, making the two shorter parts easier to store and carry and ship with Pet Solar Kits. It keeps the energizer off the ground but can also keep it low and hidden from prying eyes. The fin acts as a foot plate and anchor when pushed into the ground but also, with its extra area, makes a nice earth spike and plate for short distance strip grazing and pet fences.

JVA 30 Amp MPPT Regulator

Features

- Extensive internal electronics in-circuit protection
- Reliable operating safety protection: overcharging or undercharging protection, short circuit protection, thermal protection
- Automatically detects 12V or 24V DC system voltages
- Large and informative display interface to show solar parameter, battery charging parameter, battery type, battery temperature, custom presetting and fault codes, etc
- 12/24V 30A MPPT regulator
- PV Voltage up to 100V
- Internal Bluetooth
- 8+1 Battery type options
- Large LCD Screen
- Splash Proof IP43 Enclosure
- 12V or 24V DC System, self-adaption

minimal wind interference

S915PB

Polibraid (black and white)

A strong, more durable than standard poliwire,
2.5mm braided polymer with 9 stainless steel
strands. Suitable for more permanent or
demanding applications. Ideal for intensive
strip grazing with reels. Available in 400m rolls.
Resistance: 5000 Ohms/km.

S915PU

Ultra Polibraid (red and white)

A stronger, more durable than standard poliwire,
2.5mm braid, combining 6 stainless steel strands
with 3 tin-coated copper strands. Offers improved
conductivity for long distances. Suitable for
permanent or high-demand applications. Available
in 400m rolls. Resistance: 180 Ohms/km.

JVA – Ratchet 40mm Horse Tape Tensioner

Easy retro-fittable, spring loaded, ratched tensioner which can be
installed anywhere along the horse tape to take up and maintain
tension easily.

Triple Sight Fence Cameras

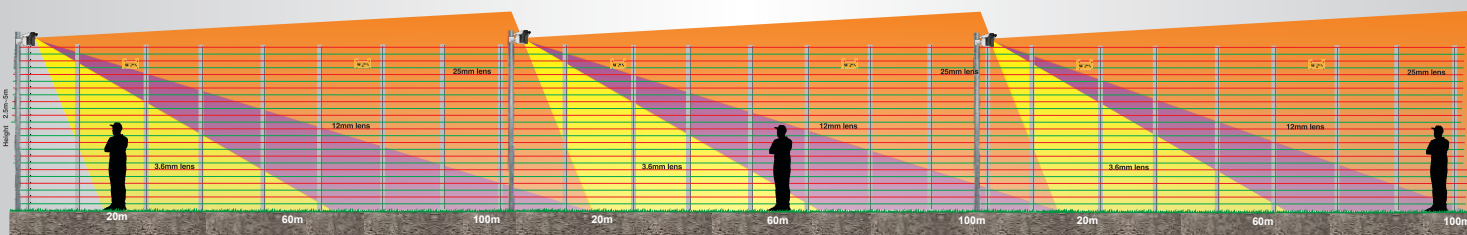

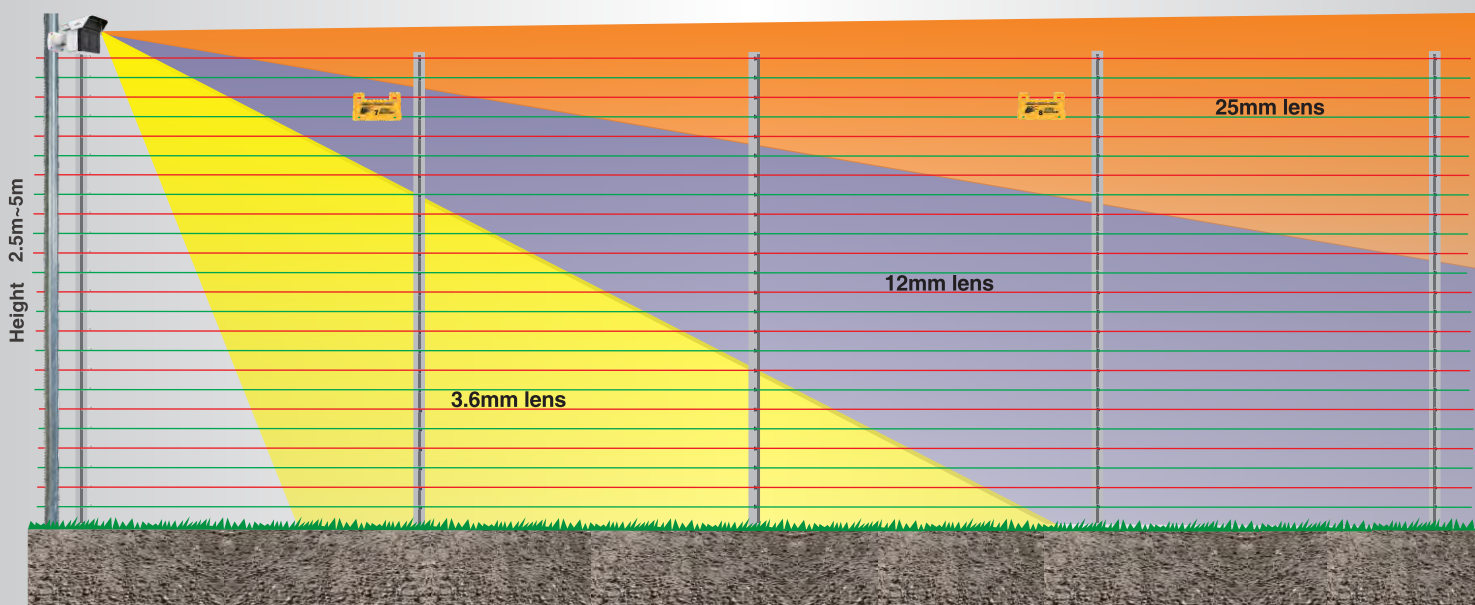

This Long-Range Perimeter Protection camera integrates three lenses into a single network camera, delivering detection ranges of up to 100 meters.

It offers a cost-effective solution for monitoring electric fence zones, providing reliable detection and clear visual verification along your perimeter.

Value

- One camera is worth three traditional cameras, greatly saving costs.
- Three lenses run Perimeter Protection simultaneously, not missing any targets.
- High detection accuracy helps reduce false alarms.
- Long-distance detection can be used during day and night, meeting the needs of users in various scenarios.

With illumination control algorithm by area, 8 IR LED's are used to produce different intensities of fill light for different areas. It fills in the light at a longer distance and ensures uniform brightness at full range, reducing overexposure and underexposure to guarantee clear visibility of targets with the range.

Value

- IR fill light uniformity increased by 50%.
- IR distant light intensity increased by 30%.

Perimeter Protection Camera

Three in One Camera (TIOC) Pro Series

Pro-series cameras capture high-quality, vibrant colour images even in low-light and night time conditions. When a perimeter event is detected, the built-in siren and active deterrence lights activate instantly, delivering effective, proactive protection along your perimeter.

Standard IR Camera –
Black and White Images at Night

WizColor Camera –
Full Color Images at Night

Why we recommend the TIOC-Pro

- True Full Colour Surveillance - 24/7 colour image
- Smart Motion and Perimeter Protection
 - Intrusion detection
 - Tripwire crossing
 - Human/Vehicle detection
- Active deterrence
 - Flashing Red and Blue Lights
 - Audible Siren and Voice Alerts
 - Two-way Audio

Value

- 24/7 Perimeter Protection
- Accurate Detection through AI Algorithms
- Deters intruders and prevents theft
- Quicker Responses from Security guards

For more information:
Contact your nearest Stafix branch
or visit www.stafix.co.za

Thermal & Visual Protection

Dual Thermal Camera

This dual-lens thermal camera combines thermal and visible imaging in one powerful security solution.

Thermal technology enables reliable detection in total darkness and challenging conditions, while the visible camera with Smart IR delivers clear video for visual verification during the day and at night.

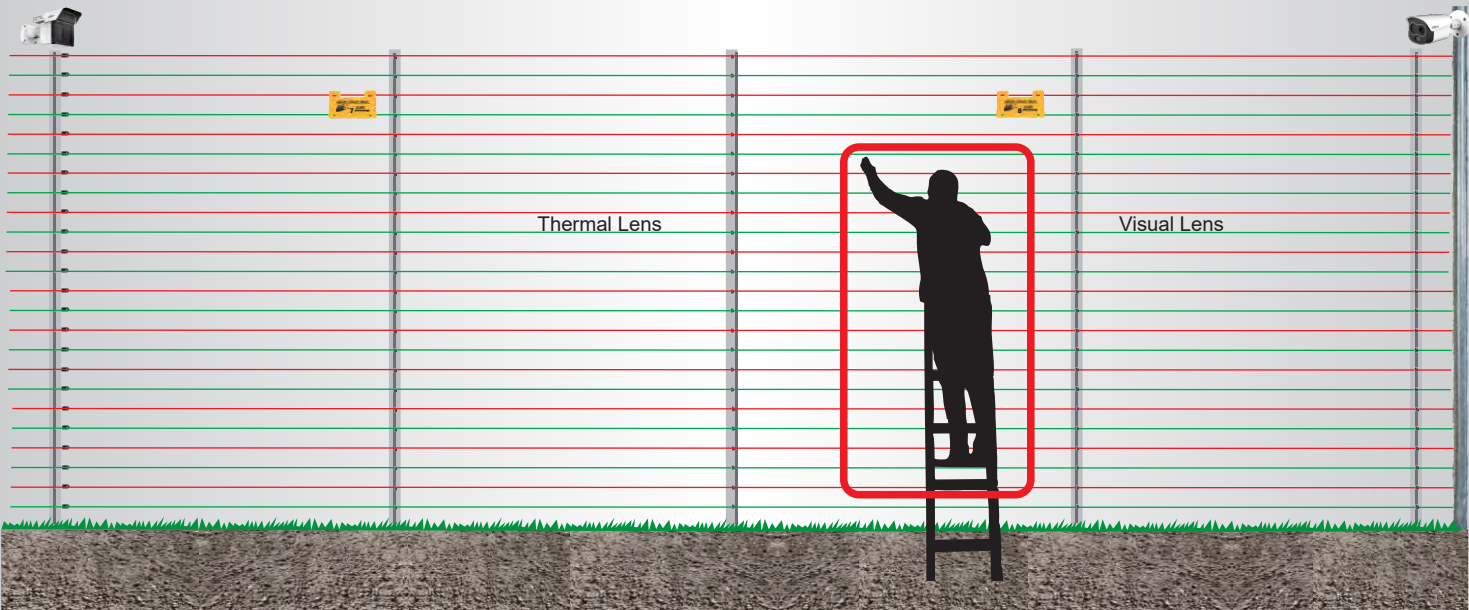

Value

- Cost-Effective All-in-One Solution – A single camera provides both thermal and visual imaging
- Detection and visibility across all lighting and weather conditions
- Intelligent algorithms filter out false alarms caused by animals, moving leaves or branches
- Further detection range using thermal technology

Smart Motion & Perimeter Protection

- Intrusion detection
- Line crossing detection
- Human/vehicle detection
- Heat Detection & Alarm (Thermal)
- Cold & Hot Spot Trace (Thermal)

Home Sec Expo 2026

Questions and Answers

*Dr. Jules Ohm – his motto is
“No challenge too big, no challenge too small”*

Question:

A farmer has enquired as to why the copper wire in our new S915PU Ultra-Polibraid wire is coated with tin as he understands that current ‘flows’ along the surface of a wire and if so, with copper being the better conductor, why coat it with tin?

Answer:

Dr Jules explains that he is half right: copper is a better conductor than tin but that it’s AC current that ‘flows’ along the surface of a conductor, while DC current, that’s used in electric fencing, flows throughout the conductor so the copper in this Polibraid wire is conducting as well. Incidentally, the diameter of a wire will also influence the conductivity of the wire – the thicker the wire, the less the resistance.

But why coat it in tin? Well, copper wires oxidize relatively quickly when exposed to air and the wire’s conductivity will deteriorate over time, whereas tin is significantly more resistant than copper to oxidation. So, the wire is tinned to protect it from rapid oxidation and thus prolong its life span.

For future practical tips, or if you require a solution to a particular challenge from Dr Jules, simply email your query to ndlovu@stafix.co.za, Mark it: Attention Dr Jules.

No challenge too big, no challenge too small

Introducing Dr. Jules Ohm

We are proud to introduce a new member of staff, Dr. Jules Ohm. Jules obtained his PhD from the University of Hard Knocks specializing in the shocking field of electric fencing and security related products. Nothing is a problem to him and he can tackle security related challenges ranging from gate automation, yard security, CCTV and burglar alarms.

Dr Jules invites you to send in your security related challenges (Jules does not like the word problems as he regards them as challenges.) and he will endeavour to provide you with the best answer to your question or challenge.

How to dual focus your cameras

A problem often encountered with CCTV surveillance systems is that when an intruder sees a camera, he will turn his back to the camera.

This new “Twin Focus” installation method will catch an intruder’s attention and he will focus on the camera enabling the cameras to focus better on him and thereby get a good clear recognizable picture.

Congratulations to Daniel (Pasha) Lekgotho, Stock Counter, on his 20-year service award.

20-Years, Lucas Scheepers

Congratulations to Lucas Scheepers, Regional Manager North West Region/Product Manager Roboguard, on his 20-year service award.

New 15% Steel Import Tax

The government has cottoned on to easy taxing and revenue generation and has, of the 1st May, introduced new 15% local "protection tax" on all imported steel products. For years we tried to get Iscor to make a quality electric fencing standard with evenly spaced holes, but our requests fell on deaf ears. Iscor's service and quality are those of a monopolistic bully.

Consequently we were forced to have standards made overseas which have perfect round holes, nicely pointed stakes and even spacing. Owing to import and transport costs the standards have always landed and been sold at 15-20% more than the Iscor equivalent, but contractors have been prepared to pay the extra for a neat fence. The government is now adding a 15% duty to the

original 5% which adds an extra 10% cost to the product. The same has happened across all imported wire products and tensioners. Sadly, as a result, we are forced to raise our prices across these products. In 30 years of running a local engineering and moulding business we have never received any support or grants from the government. It's going to be interesting to see where these taxes go!

Knowledge is Power

They say, 'Knowledge is Power' and when dealing with JVA power, it's very important to have as much knowledge as possible so as not to burn one's fingers. The same can be said for Dahua CCTV Systems, Roboguard and Askari beam systems, Automatic Gate Motors – in fact all the product ranges that Stafix Electric Fence and Security Centers market and sell.

It was with this in mind that Stafix Electric Fence & Security Centers, decided to establish a fully registered integrated training institution, Ndlovu College, to provide installers with the best theoretical and practical training possible. This fully equipped training college is situated in Harmelia, a suburb very close to Jet Park and Oliver Tambo International Airport. The facility boasts a well-equipped lecture room, a prac-room containing fences for COC training and candidate evaluation, a room fully equipped for camera and CCTV training, and demo-areas specializing in gate automation, Roboguard systems, and agricultural and wildlife fencing.

This Stafix training facility also has a fully functional Security Control Guard Room providing trainees with the opportunity to gain experience in fully integrating the diverse ranges of security products and security and animal control electric fence monitoring systems, marketed by Stafix Electric Fence and Security Centers.

The training college also has a comfortable entertainment and refreshment area and is located right next door to two moderately priced hotels.

Besides this JHB training centre, we have training centres in 14 of our Stafix Branches nationwide, making it easier and more accessible for those who wish to train and build their skills and knowledge through our available courses.

For further information on 'When and What' courses are being held, contact your closest Stafix Branch (www.stafix.co.za) or contact Johanna Dube on 011 397 3507 or email johannad@stafix.co.za.

Training courses available:

- Electric Fencing Introductory Course
- COC Course
- Dahua Basic and Advanced Course
- JVA Basic and Advanced Course
- Roboguard Wireless Perimeter Beams Course
